

FUNCTIONAL FENESTRATION

A complete line of lift-slide components is available from Functional Fenestration Inc., with an emphasis on stainless steel. Standard locks fit doors from 6 feet, 6 inches to 8 feet, 8 inches without an extension. Two alloys, economical and premium stainless steel, are available. The components feature a Kynar-coating on lock faces, and a stainless steel edge pull option allows for pulling panels out of pockets. Capacities range from up to 330-pound window systems to 550- and 880-pound door systems. Some customization is available for larger projects. Handles include a choice of finishes and styles, a removable handle feature and corrosion-resistant solid brass and stainless steel.

ULTRAFLEX

The Vega RF electric chain actuator is the latest open/close window motor from Ultraflex Control Systems. It features direct connection to the home's power, as well as rain sensors. A radio remote control can be used to operate the stainless steel chain, exiting from a central position. The design is compact in a slim, die cast case.
