

HOPPE

The HLS9000 multipoint swing door hardware from Hoppe North America Inc. has been expanded to include components for wider stile entry doors with 60mm and 70mm backsets. The supplier offers a new 60-page catalog showing these new multipoint gear systems for wood and vinyl profiles, including manual tongue, manual tongue/shootbolt, manual shootbolt and inactive versions featured with the new backsets. The hardware provides

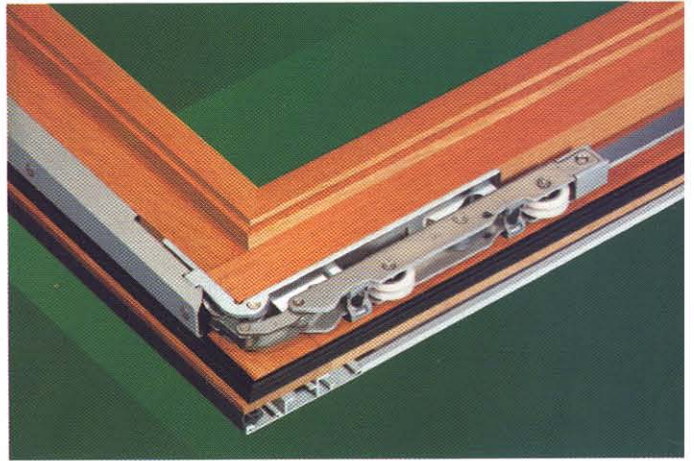

added security, tighter weather seals, smoother operation and protection against warp age and twisting in fine wooden patio and entry doors by offering multiple locking locations along the lock stile, the supplier notes. Stainless steel components offer excellent corrosion resistance in natural atmospheric conditions, which prevents pitting and staining. The HLS9000 line features a stainless steel deadbolt that is stronger than traditional deadbolts, a miss-handling device that prevents accidental locking point engagement and full-size screw supports that help control possible bending of the gear.

FFI

Functional Fenestration Inc.'s new lift slide hardware features main, movable components manufactured of high-grade, 304 series stainless steel. These components are built to prevent field repairs, with the assurance of a 12-year manufacturer's warranty, according to the supplier. Offerings include lift slide locks with drive rod and lock case in stainless steel compatible handles, a deluxe carriage kit complete with stainless steel screws and all required parts, and an improved system to connect the carriages under the door.
