**Estimated weight of your door panels:**

Number of doors:

Layout of doors (or attach basic drawing):

Length of track for each door\*:

\*note: tracks come in 3, 4, & 6 meter lengths; the door maker is responsible for making multiple track cuts.

To attach track to wall or ceiling, what type of brackets will you use?

To attach carriages to door panel, will you be using the Tiger top-mount brackets?

These systems are designed for wood door panels; if using other panel material, please state:

**Questions for Stainless steel system:**

Do you have a preference for carriages with PETP plastic wheels or stainless steel wheels?

Floor guide options: part #15001 plastic guide pin, #T227066-904 stainless steel guide, or nylon roller with track?

For systems T210, T250, T300, indicate number of wall brackets:

For systems T400, T480, T560, indicate track hanger type, and number of hangers:

Do you need a bracket spacing guide?  I already have/don't need, OR,  please send by email or fax to:

**Architects, designers, contractors, and homeowners:** FFI is a wholesale distributor, and we will sell to you through a door manufacturer or dealer. Please indicate -

I have selected the door maker, which will be:

I have not selected a door manufacturer, please send me a referral:

Use outside of recommendations voids warranty. Recommendations for installing heavy top-hung doors are:

1. Anchor head track securely to a structural member (wood, masonry, glass or metal) that is rated to hold the weight of your doors plus the hardware and track.
2. Install head track plumb and square, and all top mounts level and spaced precisely.
3. Field installation of carriages on door panels is not recommended.
